Criteria for Funding from the KIT Publication Fund

Funding Criteria:

- The articles are published in journals, the complete contributions of which are freely accessible to users on the internet at no costs immediately upon publication (“real Open Access journals”) and which apply acknowledged quality assurance procedures (peer reviews) in the respective disciplines (e.g. journals listed in the directory of Open Access journals).

- Publications, the editing fees of articles of which do not exceed EUR 2000 per article. Average article editing fees: The average costs per article financed from the KIT publication fund amounted to EUR 1250 in 2012 and EUR 1150 in 2013.

- An employee of the KIT is the submitting or corresponding author responsible for the payment of article editing fees in an Open Access journal.

- Publications financed from funds of the “Open Access Publication” program of the German Research Foundation should contain the following notice in the acknowledgments: We acknowledge support by Deutsche Forschungsgemeinschaft and Open Access Publishing Fund of Karlsruhe Institute of Technology.

If the above criteria are fulfilled, the article editing fees will be financed fully from a KIT fund established for this purpose upon request to the KIT Library.

Funds will not be granted for:

- Articles that can be made accessible online parallel to publication in a subscription journal against a fee (e.g. Open Choice model by Springer).

- Publication costs that may be paid from projects funded by third parties.
