

GUIDELINES FOR THE PUBLICATION OF INSTITUTIONAL BOOK SERIES BY KIT SCIENTIFIC PUBLISHING

KIT Scientific Publishing is part of the KIT Library and offers all KIT researchers a modern platform for publishing their peer-reviewed work. While our focus lies on electronic publishing, the production of high-value printed books is part of our range of services as well. This enables KIT researchers to choose between various alternatives in the area of open access publishing for KIT researchers.

KIT Scientific Publishing ensures together with the editor(s) the best possible distribution of research results within the scientific community in quality assured platforms in the internet and in referenced and publication databases such as Scopus and Web of Science.

For the inclusion in these indexing services the quality assurance through the editor(s) is of central importance. It is based on transparent quality criteria adhered to by the editor(s) of our book series.

The editors therefore confirm that:

- a) The series editor(s) decide which titles appear in the book series.
- b) The titles appearing in the series stated above have been compiled according to the rules for safeguarding good scientific practice.
- c) Each title appearing in the series stated above has undergone thorough quality review, e.g. by editor(s).
