

WHAT WE OFFER

Maximum Reach Through *Open Access* all of your publications are accessible and reusable worldwide – free of charge and without any restrictions.

ScholarLed Publishing With *Diamond Open Access*, the research institution provides the infrastructure. Publication fees (APCs) are incurred neither by readers nor by publishers.

Copyright Retention All articles are published under the CC BY license. In this way, your authors retain the copyright to their work allowing readers to read and share the content if they use the correct attribution.

Quality Assurance With a peer review process, you can ensure the high quality of your journal and define and control the processes yourself. We provide you with access to our Open Journal Systems (OJS) platform for the implementation.

Indexing and Archiving All published works are indexed in the main bibliographic databases with an individual Digital Objekt Identifier (DOI) and archived via KITopen and LOCKSS/CLOCKSS.

Visibility Your journal will be designed individually for you according to your wishes and will have its own website, which will be presented via our professional publishing platform.

Production We provide different service levels for the creation of your manuscripts in PDF and XML.

Service and Support We will work with you to create a project plan for your journal and advise you on all relevant issues: from questions about quality assurance, author rights, publication policies, licensing, required services and service levels - or other related to your publication project.

Status: November 2023

We would be happy to advise you if you want to set up an electronic journal at KIT or if you want to transfer your existing journal to KIT.

**PUBLISH A
DIAMOND OPEN
ACCESS JOURNAL
AT KIT**

WHO WE ARE

On behalf of the Karlsruhe Institute of Technology (KIT), KIT Library operates various scientific publication infrastructures according to the *Diamond Open Access* model, such as the *KITopen* repository or the university press *KIT Scientific Publishing*.

The service portfolio is now being expanded to include a new service:

The operation or hosting of quality-controlled open access journals (golden open access).

We offer you a simple and high-quality way to run your journal at KIT. According to the *Diamond Open Access* model, there are no fees for you as the editor of a journal, nor for your authors. All KIT researchers and their associated colleagues have access to this new service of KIT Library.

WHAT WE DO

KIT Library provides a high-quality publication infrastructure through the co-publishing partnership with Ubiquity Press. In this context, *Open Access* journals can be operated using the browser-based software Open Journal Systems (OJS). The respective editorial teams are responsible for the content. A project plan is drawn up for each journal in advance, which includes all conceptual and legal issues relating to the **founding of a new journal** or the **transfer of an existing journal**. Both the graphic preparation and all operational measures, workflows and service levels are defined.

YOUR BENEFITS

The founding of a scientific journal or the transfer of an existing journal to public infrastructure has great advantages for you and your authors: You gain control over the dissemination of the scientific findings of your community (back) and make your research visible according to your individual wishes, far from commercial sales intentions.

SERVICE LEVEL

You can choose between running a full service journal or a hosted journal. Various services related to the creation and editing of the manuscripts can be booked flexibly (including plagiarism check, editing for English texts, typesetting or production services).

Full service journals include editorial support from our co-publishing partner Ubiquity Press. You will have a personal contact person who will answer editorial questions, make corrections on your website and look after authors. You are still responsible for managing your publication project and for carrying out the peer review process.

Hosted journals are often chosen as a service model in communities for smaller publication volumes (< 50 articles per year). You can flexibly choose other additional services. Some hosted journals do their entire publishing processes, including editorial work, themselves, using only website and infrastructure services. KIT Library supports you in maintaining your journal.

WHY DIAMOND OPEN ACCESS?

Open Access is essential for modern science communication and the visibility of research today: scientific publications are accessible worldwide to all interested parties quickly and free of charge. However, the *Open Access* transformation by commercial scientific publishers is based on existing market distortions in the publication system and causes high additional costs for the scientific system. Science-led publication infrastructures based on the *Diamond Open Access* model, which make *Open Access* Journals available to readers and authors free of charge, offer an alternative. Funding is managed internally. The Diamond Open Access approach is therefore fully in line with the objectives of *Open Science*, brings control of publication projects back into the hands of the scientific system and helps to reduce publication costs overall.

KIT Library provides its experts from the department of publication and media services as well as the necessary infrastructure via selected, science-related co-publishing partnerships.
